TEAM SOFTMAX

Accel UdyamSync

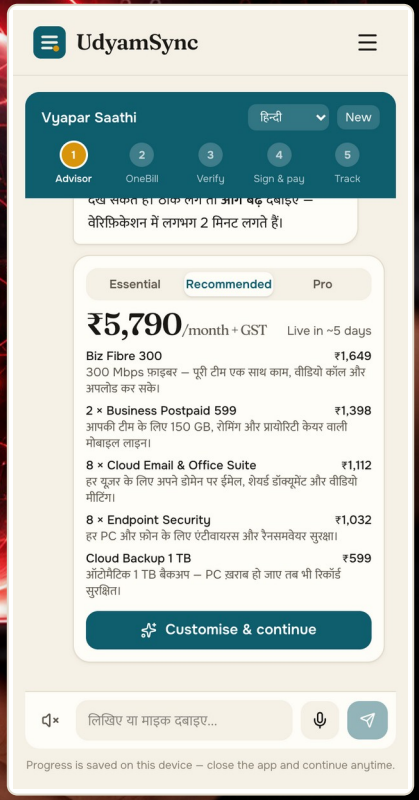

A small business goes online in one sitting: discover, price, verify and track on a phone, in its own language.

Working prototype · 65 tests · 12/12 KYC traps · 10 languages · stretch goals built

▸ Watch the demo (2:27)

Platform Partner unstop

93 of every 100 interested businesses never get switched on

Accel's own data, 5,000 SMB leads in Apr–Jun 2026: demand is there; the journey loses them.

17.6 days
from lead to live

3 calls
customers chase their order

₹15,053
spent to win one customer

9.6% vs 2.0%
activation with vs without GSTIN

Where they leave → what UdyamSync removes

827 no time for a visit, or never scheduled
→ **Self-serve advisor**

1,006 price, complex or slow quote
→ **OneBill, instant**

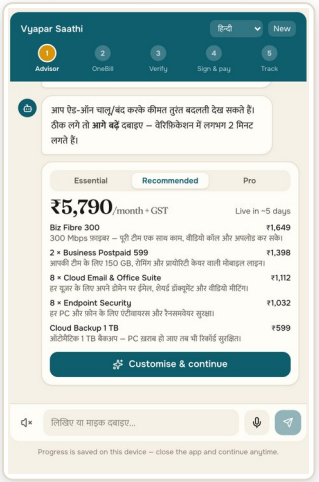

273 documents, paperwork, absent signatory
→ **Smart KYC + e-sign link**

56 activations that broke catalogue rules
→ **Rules engine blocks them**

Platform Partner unstop

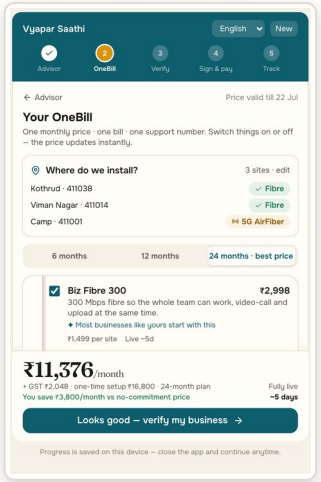

Built and live: hello to a verified order in one sitting

Every screen below is the working prototype (owner app, mobile-first web; the same flow runs in WhatsApp and on a partner's tablet).

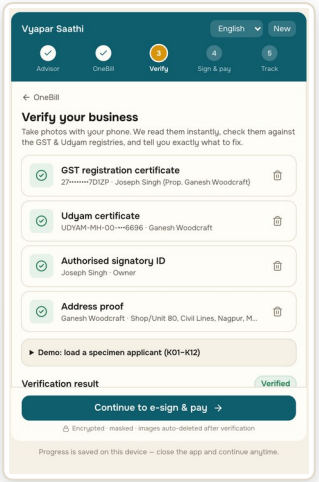

1 Discover

Hindi voice or text; a GSTIN auto-fills the business from the registry.

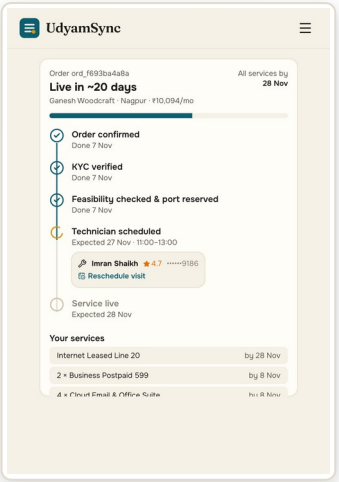

2 OneBill

One monthly price; add-ons re-price live; fibre or 5G AirFiber per branch pincode.

3 Verify

Consent first; documents read on our server and checked against GST and Udyam.

4 Sign & track

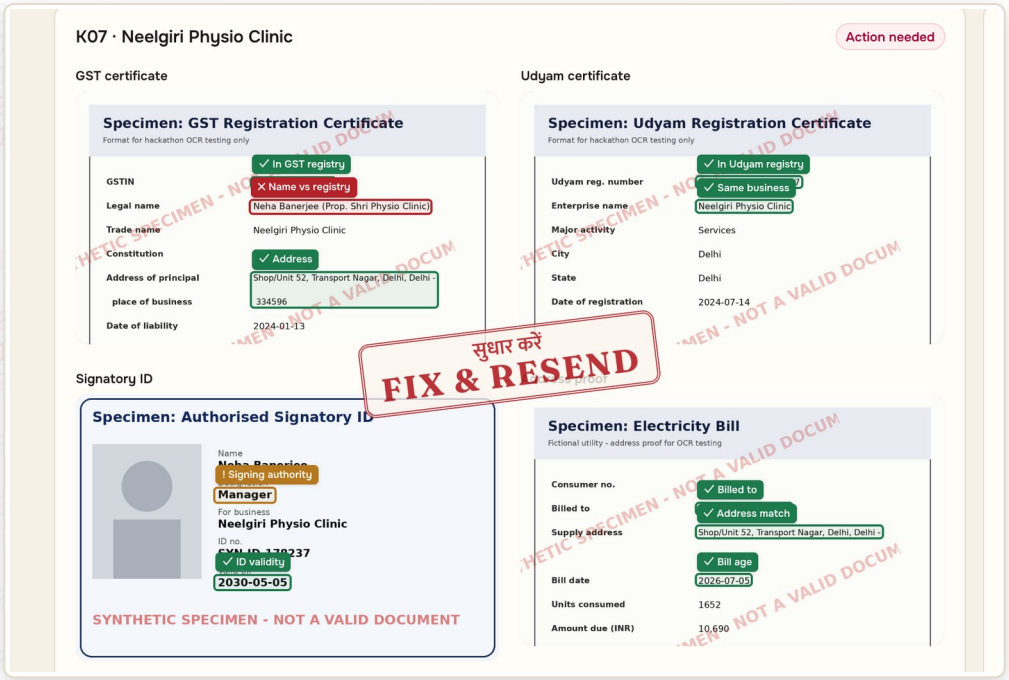

Aadhaar e-sign, slide-to-pay UPI AutoPay, 5-stage tracker with WhatsApp updates.

65 automated tests · **30/30** advisor scenarios · **12/12** KYC traps caught · **10** languages + voice · **3/3** stretch goals

Platform Partner unstop

Smart KYC catches every planted problem, and shows where

Live KYC Inspector: 12 specimen applicants, on-server OCR + 20+ registry checks; boxes mark where each finding was read.

Caught in the case's specimens

K01	Cancelled GSTIN + blank Udyam number
K02	7° tilted scan, auto-straightened
K04	Blurred GST certificate
K05	Udyam certificate missing
K06	GSTIN typo: checksum fails, fix suggested
K07	Business name edited vs registry
K11	Utility bill 257 days old (limit 90)

DPDP Act by design

Consent per purpose, hash-chained · no Aadhaar number ever stored · OCR on our own server · encrypted, purged 30 days after verification · "My Data": view, export, erase

Who first, and what we sell them: four segments, four priced bundles

Bundles: the advisor's live pick for a typical business in each segment. Conversion and payback: smb_leads.csv.

#	Segment · share of base	Recommended bundle (typical business)	Price / mo	Contract	Today: conv. · payback
1	Professional offices · 25% Clinic, CA firm, coaching, 14 staff	Biz Fibre 300 + 4 business SIMs + cloud email and endpoint security for 14 seats	₹8,197	12 mo, no setup fee	11.1% · 1.6 mo
2	Micro retail & services · 55% Kirana, salon, pharmacy, 3 staff	Biz Fibre 100 + 2 business SIMs + WhatsApp Business catalogue (entry: fibre + SIM ₹1,448)	₹3,046	12 mo, no setup fee	4.1% · 8.1 mo
3	Small multi-site · 15% Restaurant chain, 5 outlets	Fibre 300 + SIM at every outlet, 20 cloud CCTV cameras, 4G/5G failover per site, on one bill	₹16,965	24 mo, ₹21,750 setup	11.0% · 0.6 mo
4	Small manufacturers · 5% Auto-parts unit, 85 staff	20 Mbps leased line + 9 SIMs + email and security for 29 seats; IoT machine monitoring in Pro	₹19,887	24 mo, ₹5,000 setup	12.8% · 1.0 mo

Offices first

Highest value per rupee: 11.1% conversion, ₹6,575 median bundle, 1.6-month payback, and 86% already have a GSTIN, so KYC is instant.

Kirana at scale

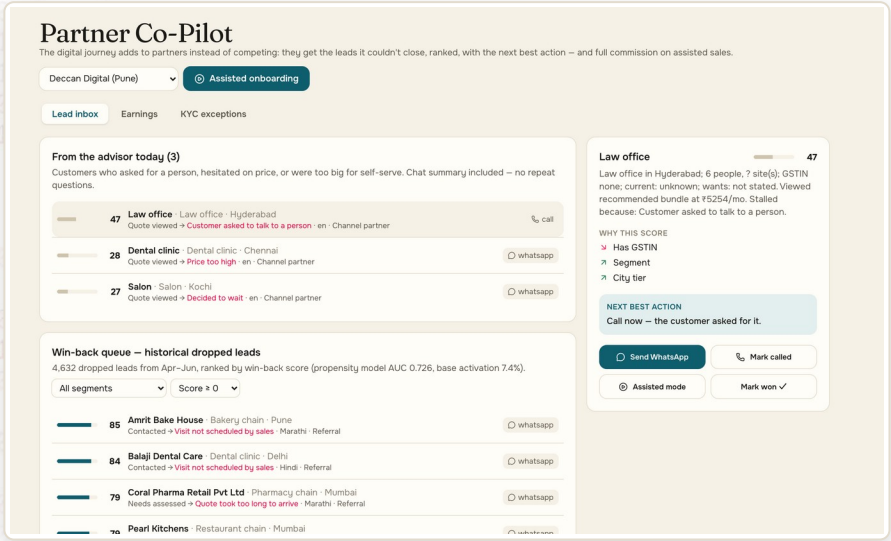

54% of leads but very price-sensitive: sold on WhatsApp in Hindi or Marathi, Essential tier only, so the cost to serve stays low.

Every tier saves

Commitment discounts of ₹450 to ₹7,975 a month off list price, plus one bill and one support number instead of 3–4 vendors.

The app adds to the field force and partners; it never competes

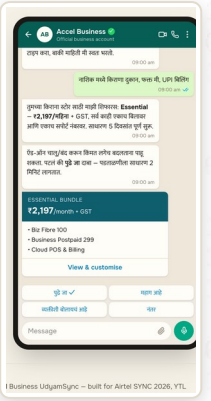

Live Partner Co-Pilot: leads the advisor can't close go to the local partner, ranked, with the chat summary attached.

- 4,632 dropped leads ranked by a win-back score: propensity model (AUC 0.73) × how recoverable the drop reason is
- Assisted mode on a tablet; KYC exceptions fixed with the owner

Who does what

1. **Advisor (web, voice, WhatsApp)**
   Self-serve for offices and kirana: discovery, quote, KYC, e-sign, tracking
2. **Channel partners**
   Get every stalled lead in their area with a next best action, and earn commission on digital sales there too
3. **Field sales**
   Only multi-site and factory deals: the advisor qualifies and books the site survey

Same advisor on WhatsApp, in Marathi

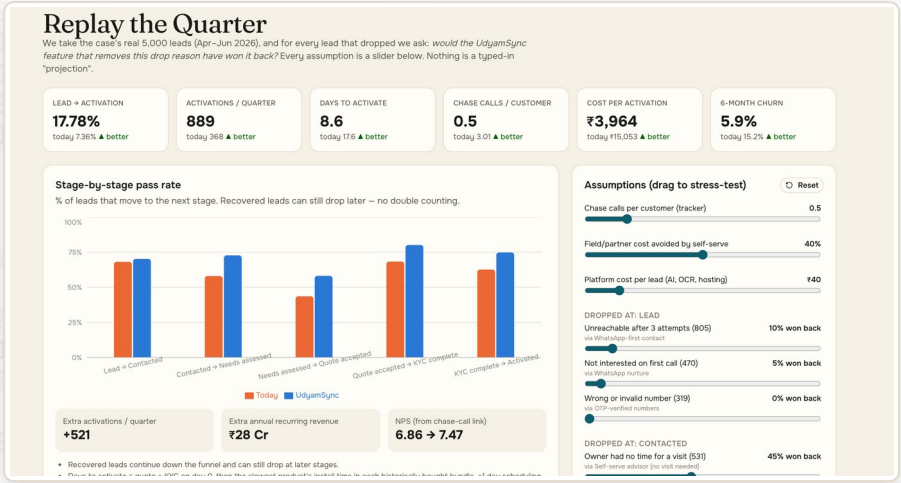

Why partners say yes

Today 827 leads drop because no visit happened. The Co-Pilot turns those into warm, pre-qualified calls, so partners do fewer visits and close more.

Platform Partner unstop

Five metrics, five targets: same 5,000 leads, 2.4× the activations

Live Insights screen: each drop reason is won back only by the feature that removes it, at cautious 10–50% rates.

Metric that matters	Today	Replayed	Pilot target
Lead → activation	7.36%	**17.8%**	≥ 15%
Days lead → live	17.6	**8.6**	≤ 9
Cost per activation	₹15,053	**₹3,964**	≤ ₹5,000
Chase calls / customer	3.0	**0.5**	≤ 0.5
6-month churn	15.2%	**5.9%**	≤ 8%

- Churn follows chase calls in the data (1 call → 5.9%, 5 calls → 27.9%); the tracker removes the calls.
- Platform cost ≈ ₹40 per lead (AI, OCR, hosting); field effort shifts to leads the advisor hands over.
- Compliance re-run: all 56 historical rule breaches are blocked at quote time.

+521
activations every quarter

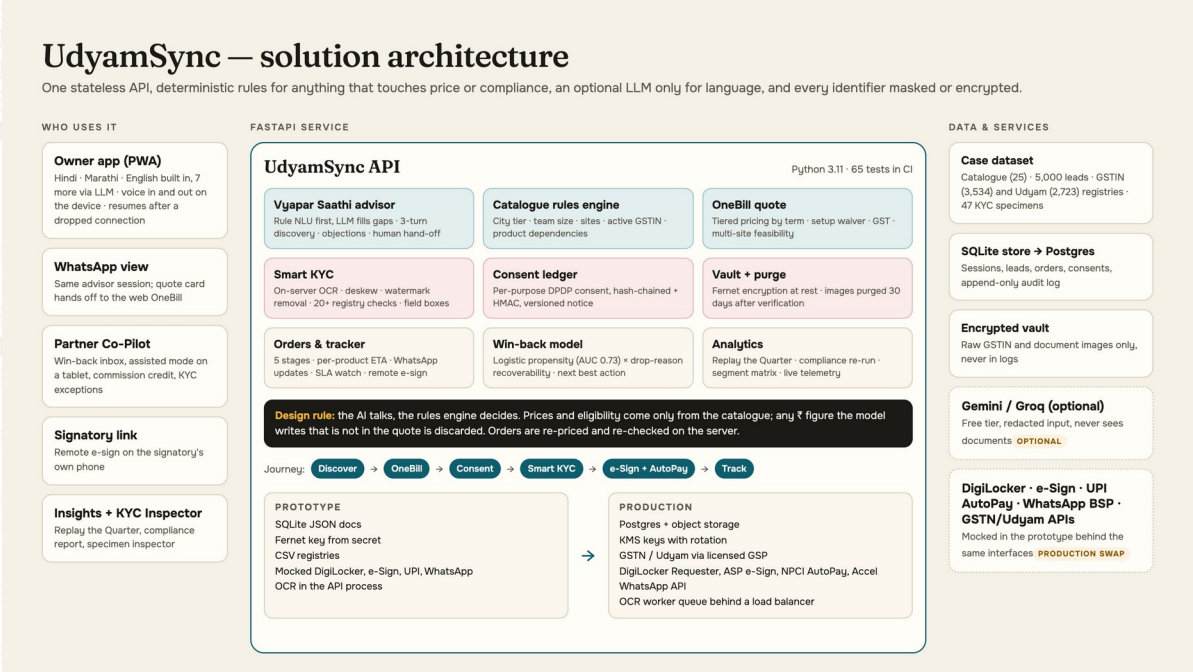

≈ ₹28 Cr
new annual recurring revenue

56 → 0
rule-breaking sales

Platform Partner unstop

Engineered to ship: architecture, rollout, risks

The AI talks, the rules engine decides. Mocks sit behind production interfaces, so the pilot swaps adapters, not logic.

Rollout

0–90 days
Pune + Jaipur pilot: offices on web, 20 partners, real DigiLocker and e-sign

3–6 months
6 cities; kirana on WhatsApp; GSP registry APIs, NPCI AutoPay

6–12 months
All tier 1–2 cities; multi-site and factories via the Co-Pilot

Risks, handled

- Wrong AI answer → prices only from the catalogue; 30-scenario eval in CI
- Partner pushback → leads and commission flow to them
- Document fraud → registry checks + human exception queue

Platform Partner unstop

Privacy and security note: DPDP Act, 2023 built into the product

Every choice below is implemented and tested in the prototype; the full 1-page note is docs/PRIVACY_NOTE.md in the repo.

Consent, per purpose

Asked before any upload (no consent, no upload). Verification is required; WhatsApp updates, partner sharing and marketing are separate and off by default. KYC data is never reused for marketing.

Data minimisation

A GSTIN lookup replaces typing the details. The Aadhaar number is never collected: DigiLocker and e-sign return yes/no and a reference. Partners see a masked summary, never documents.

Masked and encrypted

GSTIN, Udyam, phone and ID numbers are masked in the UI, APIs and logs. Raw IDs and images are encrypted at rest; OCR runs on our own server, never a third-party AI.

Storage limitation

Document images are purged automatically 30 days after verification, and the owner sees the date. Masked fields are kept only for the contract plus the telecom audit period.

Consent you can audit

Append-only ledger, hash-chained and HMAC-sealed, tied to the notice version shown. Editing any record breaks the chain, and a CI test proves it.

Rights and security

“My Data” page: view, export, withdraw consent, erase; grievance reply in 7 days. Server re-prices every order, uploads are type- and size-checked, partner views are role-based.

Prototype honesty: registries, DigiLocker, e-sign, UPI AutoPay and WhatsApp are simulated behind production interfaces; all data is synthetic and redacted before any AI call.

Everything the brief asked for, answered

Key questions, build challenge and deliverables from the case, each mapped to where it is shown.

The brief asks	Our answer	Where
Q1 Segments and bundles	✓ Offices first, kirana at scale; 4 bundles with products, price and contract	Slide 5
Q2 Discovery without a salesperson	✓ Voice or text advisor in Hindi, Marathi, English (+7 via AI), 3 questions, GSTIN pre-fill	Slide 3, video
Q3 Near-instant, DPDP-compliant KYC	✓ Registry lookup, on-server OCR, DigiLocker, e-sign; consent per purpose	Slides 4, 9
Q4 Role of field force and partners	✓ Partners get stalled leads + commission; field sales only on big deals	Slide 6
Q5 Metrics and targets	✓ 5 metrics with today, replayed and pilot targets	Slide 7
Build: advisor, quote, KYC, tracker	✓ All 4 built; stretch: voice, WhatsApp, partner back-office, propensity score	Slide 3, video
Deliverables	✓ Video 2:27 (≤ 3 min), code, architecture, ≤ 10-slide business case, privacy note	Links below, 8, 9
