Accel UdyamSync

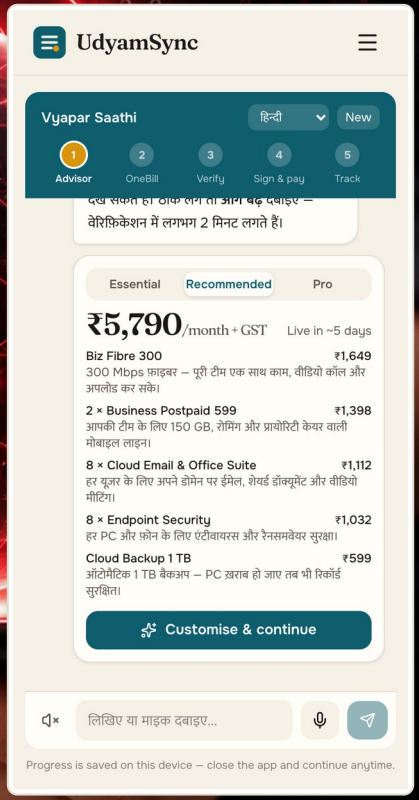

A small business goes online in one sitting: discover, price, verify and track on a phone, in its own language.

Working prototype · 65 tests · 12/12 KYC traps caught · 10 languages · ₹0 to run

▸ Watch the demo (2:27)

Platform Partner unstop

93 of every 100 interested businesses never get switched on

Accel's own data, 5,000 SMB leads in Apr–Jun 2026: demand is there; the journey loses them.

17.6 days
from lead to live

3 calls
customers chase their order

₹15,053
spent to win one customer

9.6% vs 2.0%
activation with vs without GSTIN

Where they leave → what UdyamSync removes

827 no time for a visit, or never scheduled
→ **Self-serve advisor**

1,006 price, complex or slow quote
→ **OneBill, instant**

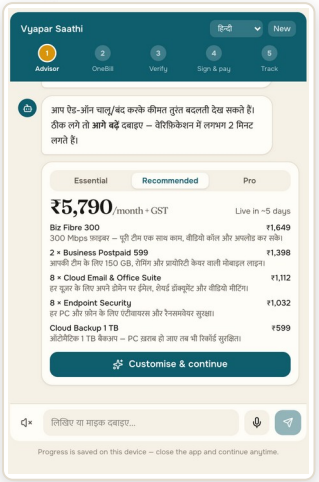

273 documents, paperwork, absent signatory
→ **Smart KYC + e-sign link**

56 activations that broke catalogue rules
→ **Rules engine blocks them**

Platform Partner unstop

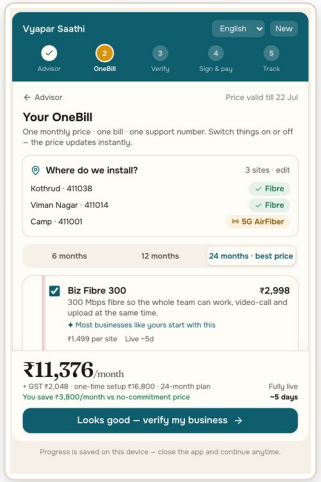

Built and live: hello to a verified order in one sitting

Every screen below is the working prototype (owner app, mobile-first web; the same flow runs in WhatsApp and on a partner's tablet).

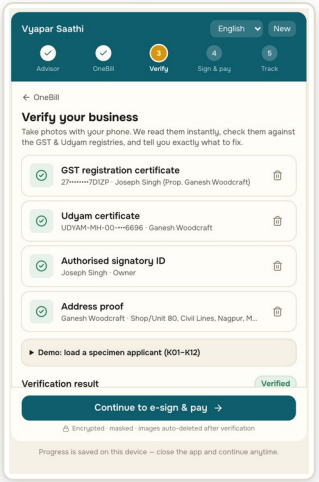

1 Discover

Hindi voice or text; a GSTIN auto-fills the business from the registry.

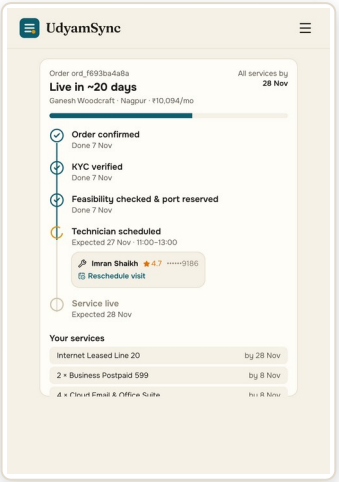

2 OneBill

One monthly price; add-ons re-price live; fibre or 5G AirFiber per branch pincode.

3 Verify

Consent first; documents read on our server and checked against GST and Udyam.

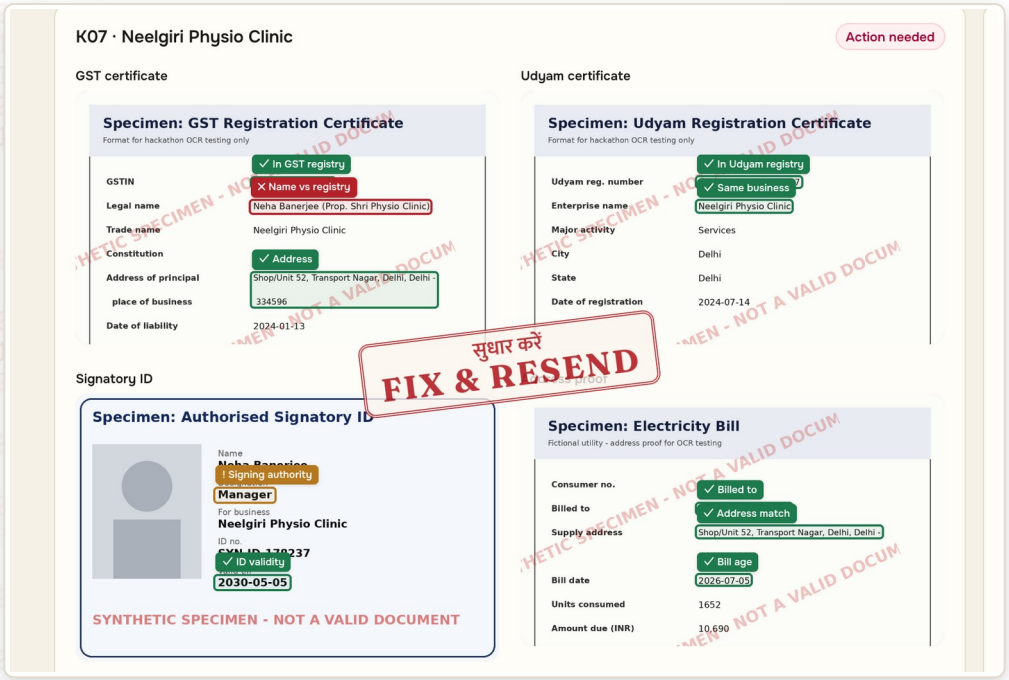

4 Sign & track

Aadhaar e-sign, slide-to-pay UPI AutoPay, 5-stage tracker with WhatsApp updates.

65 automated tests · **30/30** advisor scenarios · **12/12** KYC traps caught · **10** languages + voice · **₹0** to run (free tiers)

Smart KYC catches every planted problem, and shows where

Live KYC Inspector: 12 specimen applicants, on-server OCR + 20+ registry checks; boxes mark where each finding was read.

Caught in the case's specimens

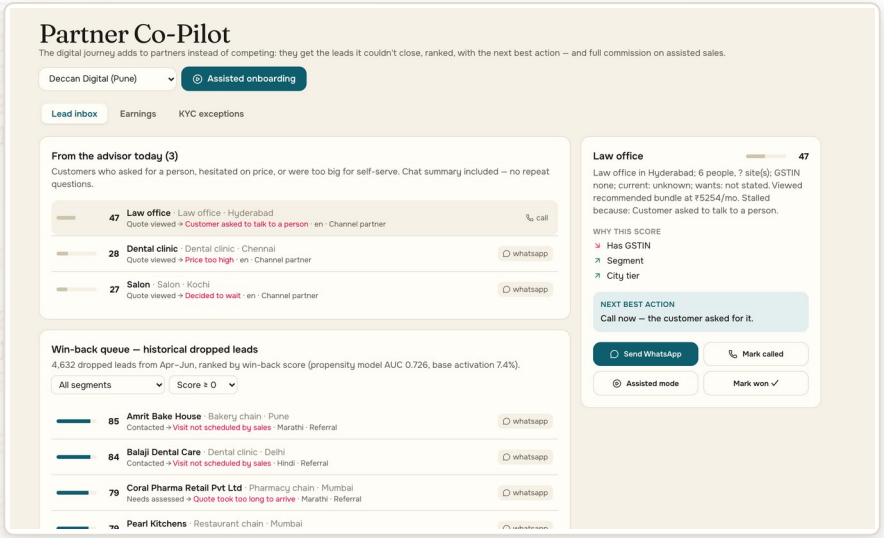

K01	Cancelled GSTIN + blank Udyam number
K02	7° tilted scan, auto-straightened
K04	Blurred GST certificate
K05	Udyam certificate missing
K06	GSTIN typo: checksum fails, fix suggested
K07	Business name edited vs registry
K11	Utility bill 257 days old (limit 90)

DPDP Act by design

Consent per purpose, hash-chained · no Aadhaar number ever stored · OCR on our own server · encrypted, purged 30 days after verification · "My Data": view, export, erase

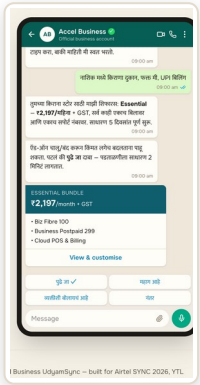

Partners stay in the deal. Offices first, kirana at scale

Segment order comes from the case economics; bundles are priced live by the prototype's rules engine.

- Every lead the advisor can't close reaches a partner with the chat summary, a win-back score (model AUC 0.73) and the next best action
- Assisted mode on a tablet; commission credited automatically, so the app never takes their customer

#	Segment	Conv.	Bundle/mo	Payback
1	Professional offices	11.1%	₹6,575	1.6 mo
2	Micro retail (54% of leads)	4.1%	₹2,470	8.1 mo
3	Multi-site chains	11.0%	₹28,080	0.6 mo
4	Manufacturers	12.8%	₹15,910	1.0 mo

Priced live by the engine

₹2,197 /mo Kirana, Nashik · WhatsApp, Marathi

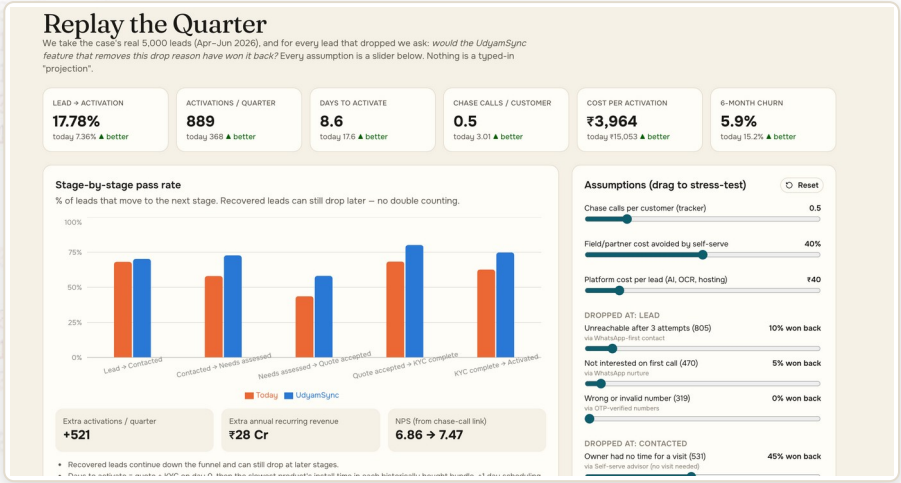

₹5,790 /mo Dental clinic, Pune · Hindi voice

₹11,376 /mo 3 restaurants, Pune · 3 branches

Micro retail is reached on WhatsApp at near-zero cost to serve; field sales focus on multi-site and manufacturing.

Replay the quarter: same 5,000 leads, 2.4× the activations

Live Insights screen: each drop reason is won back only by the feature that removes it, at cautious 10–50% rates.

Metric that matters	Today	Replayed	Pilot target
Lead → activation	7.36%	**17.8%**	≥ 15%
Days lead → live	17.6	**8.6**	≤ 9
Cost per activation	₹15,053	**₹3,964**	≤ ₹5,000
Chase calls / customer	3.0	**0.5**	≤ 0.5
6-month churn	15.2%	**5.9%**	≤ 8%

- Churn follows chase calls in the data (1 call → 5.9%, 5 calls → 27.9%); the tracker removes the calls.
- Platform cost ≈ ₹40 per lead (AI, OCR, hosting); field effort shifts to leads the advisor hands over.
- Compliance re-run: all 56 historical rule breaches are blocked at quote time.

+521
activations every quarter

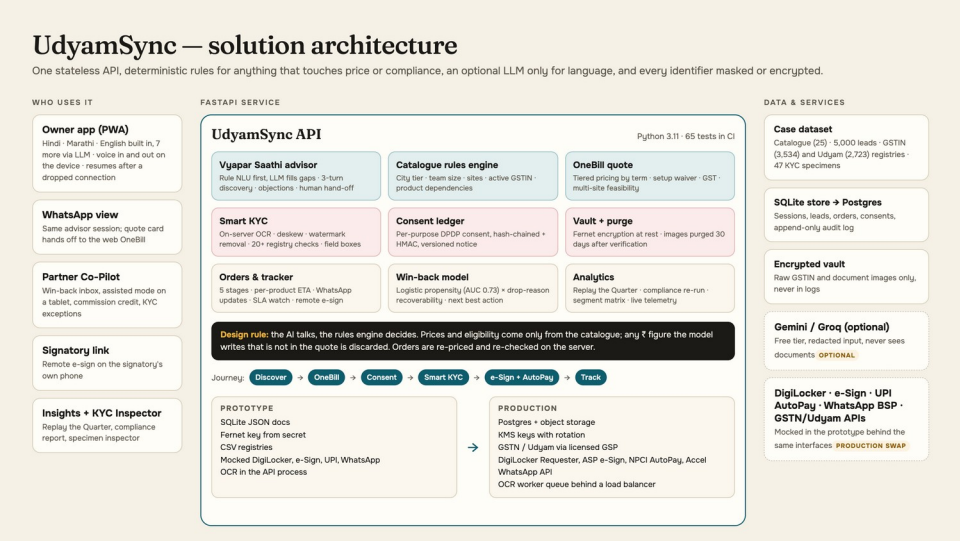

≈ ₹28 Cr
new annual recurring revenue

56 → 0
rule-breaking sales

Platform Partner unstop

Engineered to ship: architecture, rollout, risks

The AI talks, the rules engine decides. Mocks sit behind production interfaces, so the pilot swaps adapters, not logic.

Rollout

0–90 days Pune + Jaipur pilot: offices on web, 20 partners, real DigiLocker and e-sign

3–6 months 6 cities; kirana on WhatsApp; GSP registry APIs, NPCI AutoPay

6–12 months All tier 1–2 cities; multi-site and factories via the Co-Pilot

Risks, handled

- Wrong AI answer → prices only from the catalogue; 30-scenario eval in CI
- Partner pushback → leads and commission flow to them
- Document fraud → registry checks + human exception queue
