Accel UdyamSync

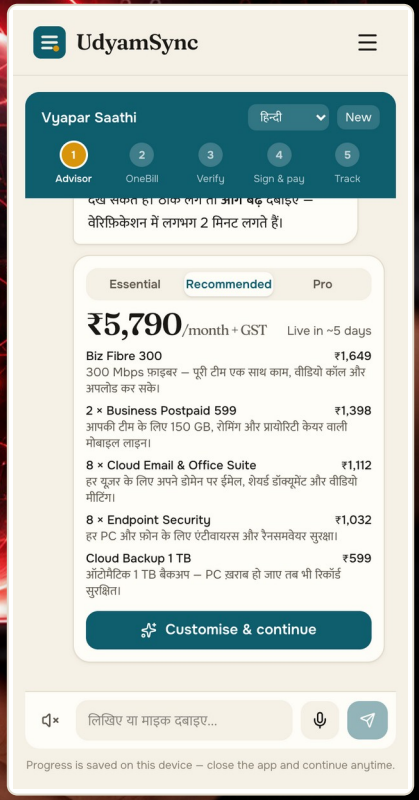

A small business goes online in one sitting: discover, price, verify and track on a phone, in its own language.

Working prototype · 65 tests · 12/12 KYC verdicts right · 3 + 7 GenAI languages

▸ **Watch the demo (2:27)**

Platform Partner unstop

93 of every 100 interested businesses never get switched on

Accel's own data, 5,000 SMB leads in Apr–Jun 2026: demand is there; the journey loses them.

17.6 days
from lead to live

3 calls
customers chase their order

₹15,053
spent to win one customer

9.6% vs 2.0%
activation with vs without GSTIN

Where they leave → what UdyamSync removes

827 no time for a visit, or never scheduled
→ **Self-serve advisor**

1,006 price, complex or slow quote
→ **OneBill, instant**

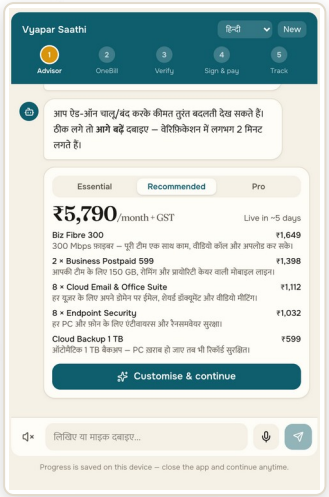

273 documents, paperwork, absent signatory
→ **Smart KYC + e-sign link**

56 activations that broke catalogue rules
→ **Rules engine blocks them**

Platform Partner unstop

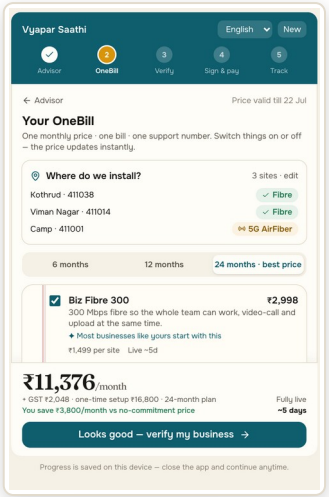

Built and live: hello to a verified order in one sitting

Every screen is the working prototype (mobile-first web); the same flow runs in a WhatsApp-style chat and on a partner tablet.

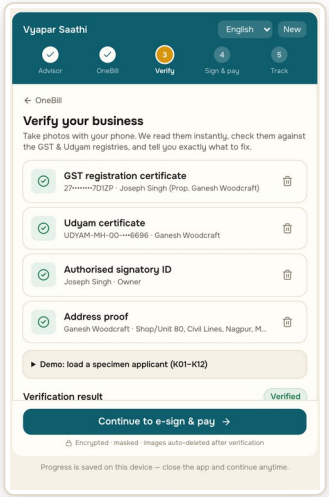

1 Discover

Hindi voice or text; a GSTIN fills in the business from the registry.

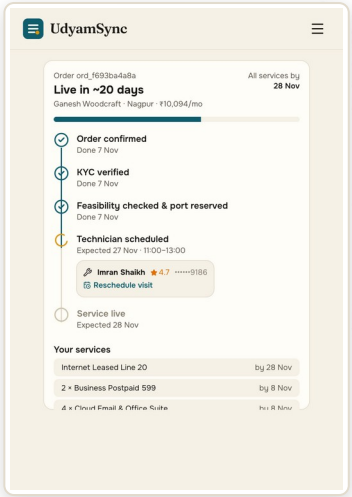

2 OneBill

One monthly price; add-ons re-price live; fibre or 5G AirFiber per branch pincode.

3 Verify

Consent first; documents read on our server and checked against GST and Udyam.

4 Sign & track

E-sign, UPI AutoPay, then an ETA per product: this order has a leased line (21 days).

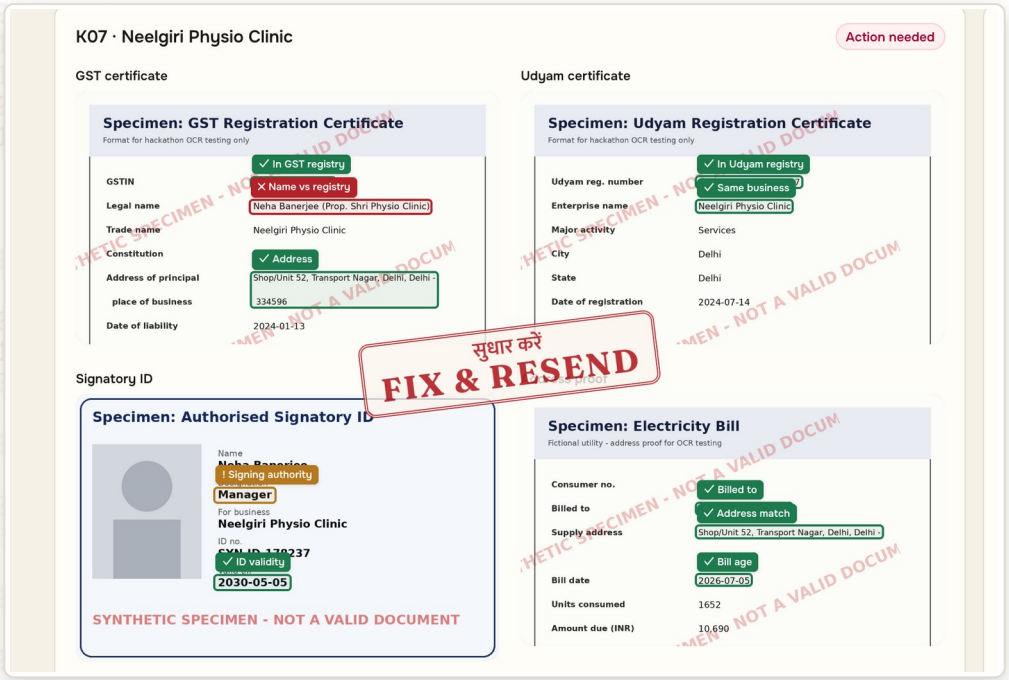

65 automated tests | **30/30** internal evals | **12/12** KYC verdicts right | **3 ✦ 7** languages* | **3/3** stretch goals

* 3 built in (Hindi, Marathi, English; work offline) + 7 via the optional GenAI layer (Gemini / Groq)

Platform Partner unstop

Smart KYC: all 12 specimen applicants judged correctly

Live KYC Inspector: on-server OCR + 20+ registry checks. 7 applicants had a planted problem, 5 were clean.

7 planted problems, all caught

K01	Cancelled GSTIN + blank Udyam number
K02	7° tilted scan, auto-straightened
K04	Blurred GST certificate
K05	Udyam certificate missing
K06	GSTIN typo: checksum fails, fix suggested
K07	Business name edited vs registry
K11	Utility bill 257 days old (limit 90)
5 clean	K03, K08–K10, K12 passed as clean

DPDP Act by design

Consent per purpose before upload · Aadhaar number never collected · OCR on our own server · images purged 30 days after verification · full 1-page privacy note filed separately

Digital fit × volume decides who goes self-serve

Bundles: the advisor's live pick for a typical business in each segment (prices ex-GST). Conversion and payback: smb_leads.csv.

Segment · share of base	Recommended bundle (typical business)	Price / mo	Contract	Conv. today	Payback*	Channel
Professional offices · 25% Clinic, CA firm, 14 staff	Biz Fibre 300 + 4 business SIMs + cloud email and endpoint security, 14 seats	₹8,197	12 mo, no setup fee	11.1%	1.6 → 0.6 mo	Self-serve web
Micro retail & services · 55% Kirana, salon, pharmacy	Biz Fibre 100 + 2 business SIMs + WhatsApp Business (entry ₹1,448: fibre + SIM)	₹3,046	12 mo, no setup fee	4.1%	8.1 → 1.6 mo	WhatsApp + partner
Small multi-site · 15% Restaurant chain, 5 outlets	Fibre 300 + SIM per outlet, 20 cloud CCTV, 4G/5G failover per site, one bill	₹16,965	24 mo, ₹21,750 setup	11.0%	0.6 mo	Field sales
Small manufacturers · 5% Auto-parts unit, 85 staff	20 Mbps leased line + 9 SIMs + email and security, 29 seats; IoT in Pro tier	₹19,887	24 mo, ₹5,000 setup	12.8%	1.0 mo	Field sales

* Payback = acquisition cost ÷ monthly bundle revenue (revenue, not margin). Today's cost per segment → UdyamSync blended ₹3,964, shown for the self-serve segments.

Self-serve where it fits

Offices and kirana are 80% of the base, single-site, with needs a 3-question advisor can price. Offices lead: 86% have a GSTIN, so KYC is instant.

Kirana: volume, not margin

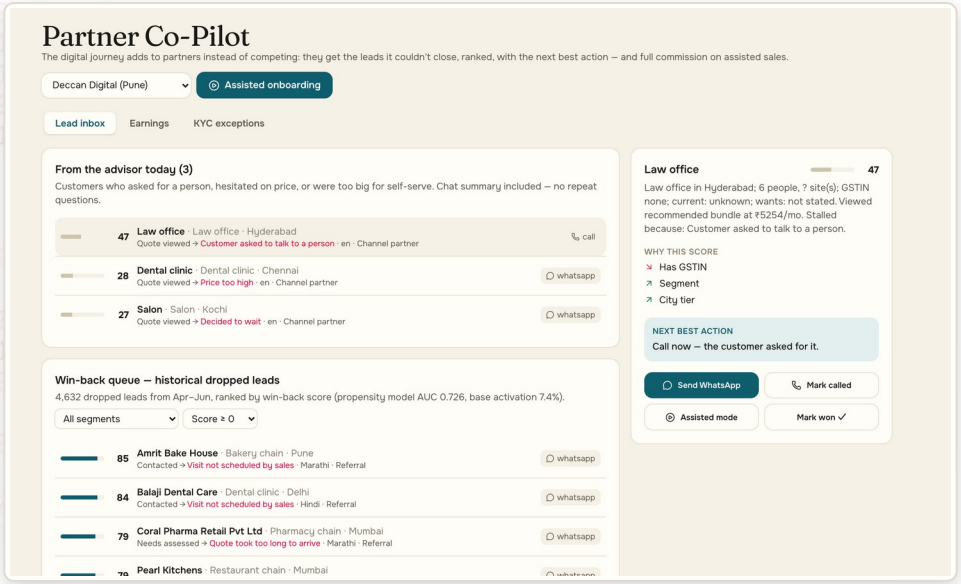

Worst conversion (4.1%) and payback (8.1 mo) today, so only the cheapest channel works: WhatsApp, Essential tier, partner-assisted KYC.

Field sales where it pays

Chains and factories convert well and pay back fastest, but need surveys, SD-WAN and leased lines. The advisor qualifies; a rep closes.

The app adds to the field force and partners; it never competes

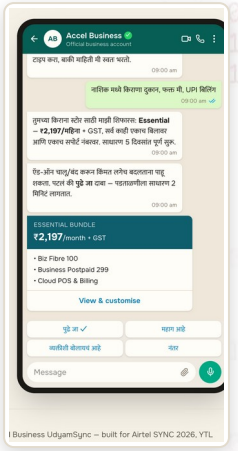

Live Partner Co-Pilot: leads the advisor can't close go to the local partner (with the owner's consent), ranked, with the chat summary.

- 4,632 dropped leads ranked by a win-back score: propensity model (AUC 0.73) × how recoverable the drop reason is
- Assisted mode on a tablet; KYC exceptions fixed with the owner

Who does what

1. **Advisor (web, voice, chat)**
   Self-serve for offices and kirana: discovery, quote, KYC, e-sign, tracking
2. **Channel partners**
   Get every consented stalled lead in their area, plus commission on digital sales there
3. **Field sales**
   Multi-site and factory deals only; the advisor qualifies and books the survey

WhatsApp-style chat (mock); production uses the WhatsApp Business API

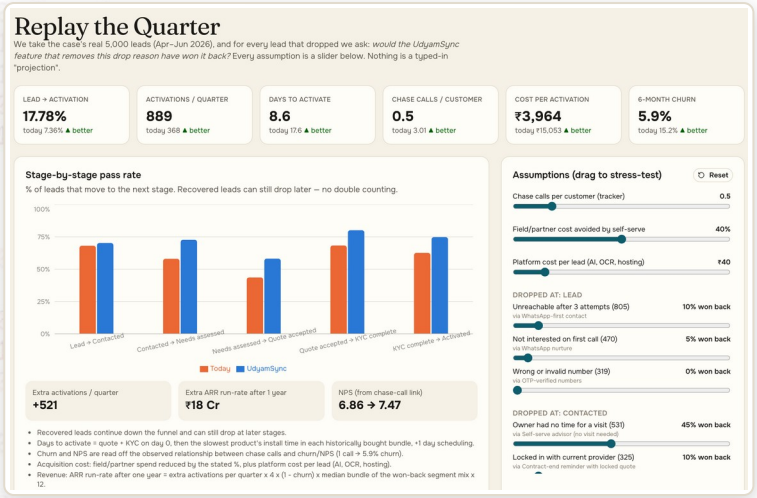

Why partners and reps say yes

827 leads drop today because no visit happened. These become warm, pre-qualified calls: fewer wasted visits, more closes, credit kept.

Platform Partner unstop

Five metrics, conservative targets: same 5,000 leads replayed

Live Insights screen: each drop reason is won back only by the feature that removes it, at cautious 10–50% rates (all adjustable).

Metric	Today	Replayed	Pilot target
Lead → activation	7.36%	**17.8%**	≥ 12%
Days lead → live	17.6	**8.6**	≤ 12
Cost per activation	₹15,053	**₹3,964**	≤ ₹7,500
Chase calls / customer	3.0	**0.5**	≤ 1.0
6-month churn	15.2%	**5.9%**	≤ 11%

- Targets sit well under the replay, so the pilot is judged on a margin of safety, not on our own model.
- Days: quote, KYC and e-sign happen in one sitting, so only install time is left, and it depends on the product: AirFiber 2 days, fibre 5, leased line 21–30.
- Churn: 1 call → 5.9%, 5 calls → 27.9% is a correlation. If only half of it is causal, churn still falls to about 10.6%.
- Cost: field spend −40% on self-served leads, plus about ₹40 platform cost per lead (AI, OCR, hosting).

+521
activations a quarter (2.4×)

≈ ₹18 Cr
ARR run-rate after year 1

56 ⟶ 0
rule-breaking sales

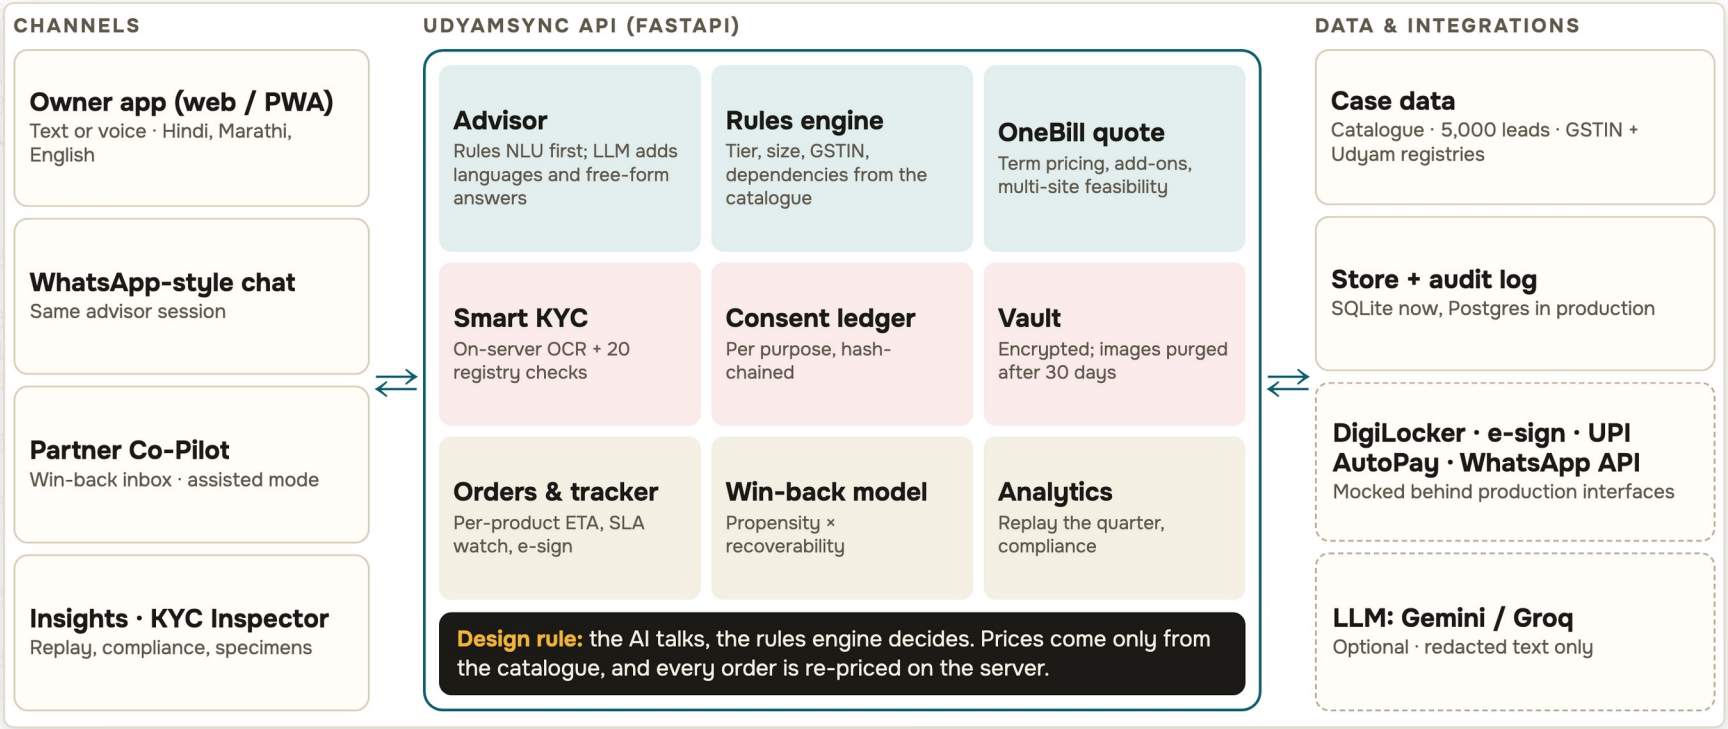

₹18 Cr = 521 × 4 qtrs × 94% kept × ₹7,771 avg bundle × 12

Platform Partner unstop

Architecture: the AI talks, the rules engine decides

Mocks sit behind production interfaces, so the pilot swaps adapters, not logic.

Full diagram + data flows (PDF) ↗

Rollout in three gates, and the risks that could stop it

Each phase starts only when the previous one meets the pilot targets on slide 7.

0–90 days **Pilot: Pune + Jaipur**

Offices on web, kirana on WhatsApp, 20 partners. Real DigiLocker and e-sign; compliance sign-off on KYC retention first.

3–6 months **6 cities**

GSP registry APIs, NPCI AutoPay, WhatsApp Business API. Field reps get advisor-qualified leads.

6–12 months **All tier 1–2 cities**

Multi-site and factory deals run through the Co-Pilot; LLM on an enterprise no-training tier.

Risk	How we handle it
Technician capacity	Faster sales can swamp install crews: city launches are gated on crew capacity, the SLA watch flags installs at risk of passing 21 days, and AirFiber (2 days) covers fibre backlogs.
Field force pushback	Reps keep credit for advisor-qualified leads in their territory and focus on high-value multi-site and factory deals.
Partner pushback	Stalled leads and commission flow to them; assisted mode makes them faster, not redundant.
Payment / AutoPay failure	UPI mandate retry, then card or net-banking mandate; the order is held, not cancelled, with WhatsApp reminders.
Wrong AI answer	Prices only from the catalogue; internal 30-scenario eval in CI (the judges' scenarios will differ).
Document fraud	Registry cross-checks, tamper and name-match flags, human exception queue.

Everything the brief asked for, answered

Key questions, build challenge and the four deliverables from the case, each mapped to where it is shown.

The brief asks	Our answer	Where
Q1 Segments and bundles	✓ Digital fit × volume; 4 bundles with products, price, contract	Slide 5
Q2 Discovery without a salesperson	✓ Advisor: 3 languages built in + 7 via GenAI, voice or text, GSTIN pre-fill	Slide 3, video
Q3 Near-instant, DPDP-compliant KYC	✓ Registry lookup, on-server OCR, DigiLocker, e-sign; consent per purpose	Slide 4, privacy note
Q4 Role of field force and partners	✓ Partners get consented stalled leads + commission; reps keep big deals	Slide 6
Q5 Metrics and targets	✓ 5 metrics: today, replayed, conservative pilot target	Slide 7
Build: advisor, quote, KYC, tracker	✓ All 4 built; stretch: voice, WhatsApp-style chat, partner view, propensity	Slide 3, video
Deliverables 1–4	✓ Video 2:27 + code · architecture PDF · this 10-slide case · 1-page privacy note	Links below
