airtel

SYNC

Accel UdyamSync

Ek baar mein vyapar digital. A small business goes from “what do I need?” to a verified, scheduled order in one ~10-minute sitting: on a phone, in its own language, with its local partner still in the deal.

93 of every 100 interested businesses never get switched on

The case data (5,000 SMB leads, Apr–Jun 2026) shows the journey, not demand, is what breaks.

17.6 days
from lead to live

3 calls
customers chase status

₹15,053
to win one customer

9.6% vs 2.0%
activation with vs without a GSTIN

Where they leave, and what removes it

827 No time for a visit, or it was never scheduled

→ **Self-serve advisor**

1,006 Price, a complex quote, or a slow one

→ **OneBill: one line, instantly**

273 Missing or mismatched documents, paperwork, absent signatory

→ **Smart KYC + remote e-sign**

56 Activations sold in breach of catalogue rules

→ **Rules engine blocks them**

From hello to a verified order in one sitting

Mobile-first web app (PWA), the same flow inside WhatsApp, and on a partner's tablet. Every screen below is the working prototype.

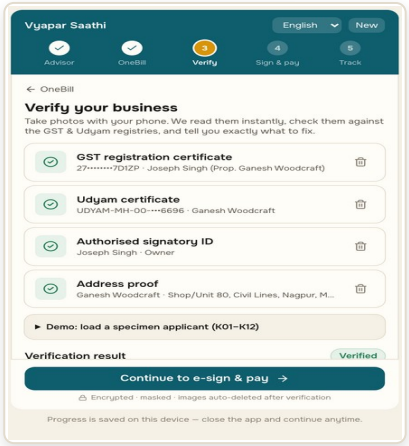

1 Discover

Three questions by text or voice in Hindi, Marathi, English (+7 via AI). A GSTIN fills half the answers from the registry.

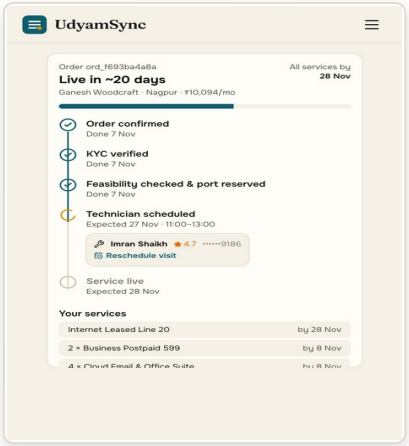

2 OneBill

Essential, Recommended or Pro on one monthly line. Add-ons toggle; branches get fibre or 5G AirFiber by pincode.

3 Verify

Consent first, then photos read on our own server and checked against the GST and Udyam registries.

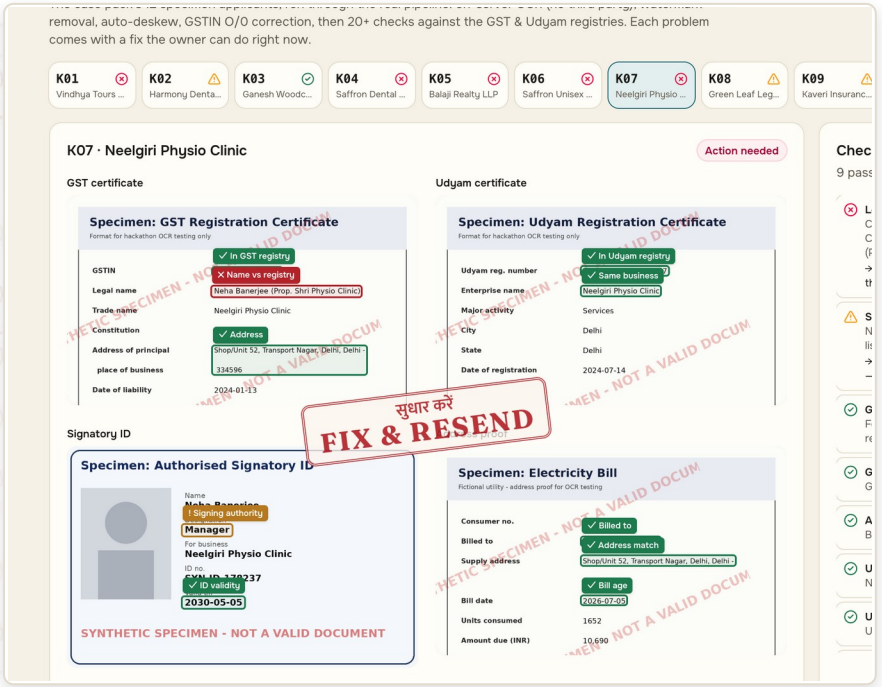

4 Sign & track

Aadhaar e-sign (or a link to an absent signatory), UPI AutoPay, then a five-stage tracker with WhatsApp updates.

Smart KYC that explains itself, built for the DPDP Act

All 12 specimen applicants run through the real pipeline; every planted problem is caught and drawn where the OCR read it.

What it caught

K01 cancelled GSTIN, blank Udyam no.

K02 7° tilted scan, auto-straightened

K04 blurred GST certificate

K05 Udyam certificate missing

K06 GSTIN typo (checksum), fix suggested

K07 business name edited vs registry

K11 utility bill 257 days old

20+ checks: format, checksum, registry status, name and address match, 90-day bill, ID validity, signing authority, image quality.

Privacy by design

- Consent per purpose, hash-chained to the notice version
- No Aadhaar number: DigiLocker and e-sign return yes + a reference
- OCR on our server; no third-party AI sees documents
- Encrypted at rest, purged 30 days after verification
- Masked IDs in UI, API and logs
- “My Data”: view, export, withdraw, erase

Offices first, kirana at scale, partners in the deal

Segment economics from the case data decide the order; bundles below are priced live by the prototype's engine.

#	Segment	Share	Conv.	Bundle	Churn	Payback	Play
1	Professional offices	25%	11.1%	₹6,575	13.8%	1.6 mo	Lead: self-serve + OneBill
2	Micro retail	54%	4.1%	₹2,470	22.7%	8.1 mo	Volume: WhatsApp, Essential
3	Multi-site	15%	11.0%	₹28,080	10.8%	0.6 mo	Advisor qualifies, field closes
4	Manufacturers	6%	12.8%	₹15,910	8.1%	1.0 mo	Experts + site survey

Example bundles from the engine

Kirana, Nashik (Marathi)

₹2,197 /mo + GST

Fibre 100 · Postpaid · Cloud POS

Dental clinic, Pune (Hindi)

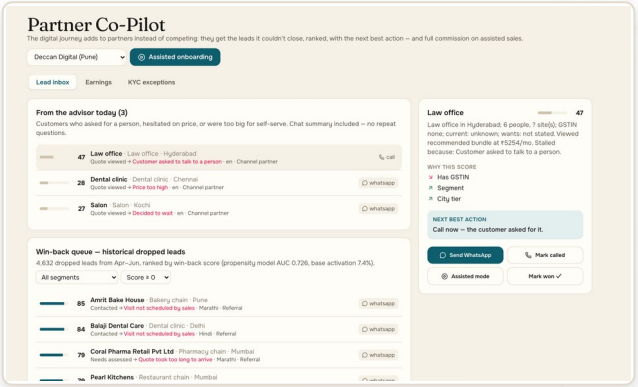

₹5,790 /mo + GST

Fibre 300 · 2 lines · email, security, backup ×8

3 restaurants, Pune

₹11,376 /mo + GST

2 × fibre + 5G AirFiber · POS · CCTV · failover

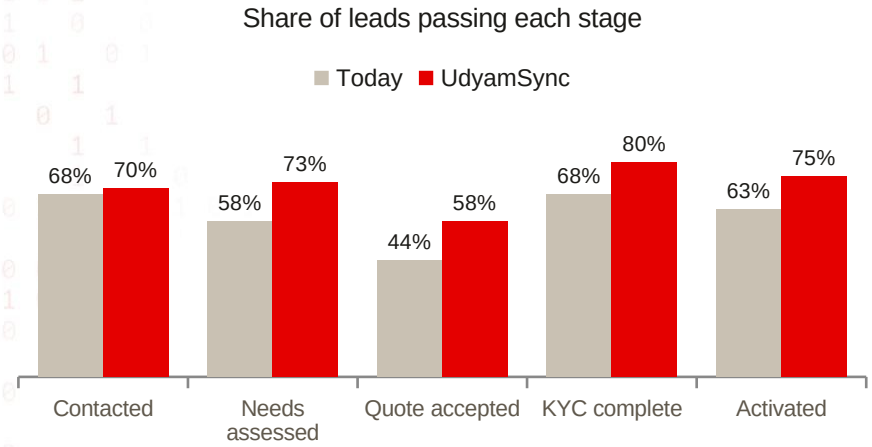

Partner Co-Pilot

- Leads the advisor can't close arrive with the chat summary, ranked by a win-back model (AUC 0.73) and a next best action
- Assisted mode on a tablet: the same flow at the counter, commission credited automatically
- Partners fix KYC exceptions; the app never takes their customer

Platform Partner unstop

Replay the quarter: the same 5,000 leads, 2.4× the activations

Each drop reason is won back only by the feature that removes it, at cautious rates (10–50%). Every assumption is a slider in the app.

Metric that matters	Today	Replayed	Pilot target
Lead → activation	7.36%	17.8%	≥ 15%
Days lead → live	17.6	8.6	≤ 9
Cost per activation	₹15,053	₹3,964	≤ ₹5,000
Status chase calls / customer	3.0	0.5	≤ 0.5
6-month churn	15.2%	5.9%	≤ 8%

+521
more activations every quarter

≈ ₹28 Cr
new annual recurring revenue

56 → 0
rule-breaking sales

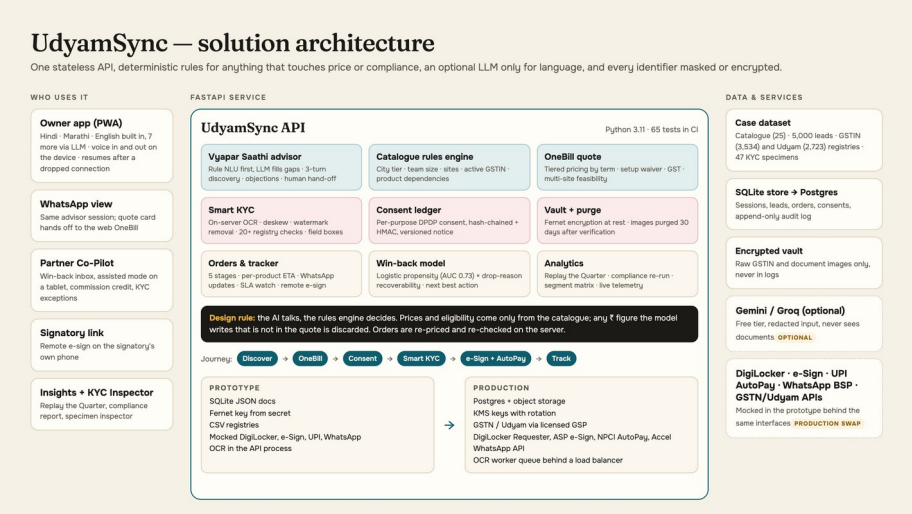

Churn falls because it tracks chase calls in the data: 1 call → 5.9% churn, 5 calls → 27.9%. The tracker removes the calls.

Unit economics: platform cost ≈ ₹40 per lead (AI, OCR, hosting); field and partner effort refocuses on leads the advisor hands over.

Platform Partner unstop

Built to ship: architecture, rollout and risks

The AI talks, the rules engine decides. Mocks sit behind production interfaces, so the pilot swaps adapters, not logic.

Rollout

0–90 days Pilot in Pune and Jaipur: professional offices on web, 20 partners in assisted mode, real DigiLocker and e-sign

3–6 months Six cities; micro retail on WhatsApp; GSP registry APIs, NPCI AutoPay

6–12 months All tier 1–2 cities; multi-site and manufacturing routed to field sales via the Co-Pilot

Risks and how the design handles them

- Wrong AI answer → prices and eligibility only from the catalogue; 30-scenario eval in CI
- Partner pushback → leads and commission flow to them
- Document fraud → registry checks + human exception queue
- Data breach → minimisation, encryption, 30-day purge, audit log

Code github.com/ac265640/UdyamSync **Demo video** UdyamSync_Demo.mp4 (2 min 27 s) **Run it** docker compose up → localhost:8080

Stack: FastAPI · React + Vite · GSAP · RapidOCR (ONNX) · scikit-learn · SQLite · Docker · GitHub Actions. ₹0 to run: offline rules and templates by default, optional free Gemini/Groq key.
